

Integrated Climate Control System with Hot Water Supply

This integrated system provides both air conditioning and hot water. It features interconnected indoor and outdoor units with a water heater for efficient climate control.

Overview

Integrated Climate Control and Hot Water Solution

This advanced climate control system provides a dual-function solution for both air conditioning and domestic hot water supply. Designed for high efficiency, the system utilizes a network of pipes to facilitate energy transfer between indoor and outdoor components. It is suitable for diverse applications, ranging from residential comfort to commercial climate management.

Technical Specifications

Included Components

- Indoor Unit
- Outdoor Unit
- Water Heater

Core Functions

Air Conditioning • Hot Water Supply

Application Scope

Residential, Commercial
