

Integrated Solar Power Supply System

The integrated power supply system is designed for photovoltaic applications, efficiently converting solar energy into usable power. It features a user-friendly interface, robust design, and is mounted on wheels for easy mobility.

Product Overview

Integrated Photovoltaic Power Solution

The GP-20000 is a robust, integrated power supply system engineered specifically for photovoltaic applications. Designed for versatility, this unit efficiently converts and manages solar energy to support a wide range of electrical loads in residential, commercial, and industrial settings. Its mobile design, featuring integrated wheels and advanced thermal management, ensures reliable performance and easy relocation across diverse environmental conditions.

Key Features

Application Areas

- Residential Solar Solutions
- Commercial Energy Systems
- Industrial Power Applications

Core Features

Photovoltaic Optimized, Mobile Design, Integrated Wheels, Thermal Management, Advanced Power Conversion, Comprehensive Protection

Performance Metrics

System Highlights

20000 GP

Model Capacity

Technical Details

Interface & Monitoring

- Integrated display screen
- Intuitive control interface
- Status indicator lights
- Performance monitoring

Design & Build

Feature	Description
Mobility	Integrated wheels
Cooling	Active ventilation system
Form Factor	Compact/Mobile
