Product Overview

High-Efficiency C/Z Purlin Production

This roll forming machine is engineered for the precise and efficient manufacturing of both C and Z shaped channel purlins. It features an interchangeable forming system that allows operators to switch between profiles quickly, significantly enhancing production versatility. Built with heavy-duty materials and a precision feeding system, this machine ensures consistent quality for structural engineering and construction applications.

Technical Construction

Roller Material	Cr12 with quenched treatment
Cutter Material	Cr12 with quenched treatment

Production Workflow

Manufacturing Process

- Decoiling
- Loading
- Molding
- Cutting
- Discharging

Logistics & Service

Technician Service Fee

150 USD

Daily Rate

Production Lead Time

30 days

Support Features

Lifetime Technical Support, Free Replacement Parts, International Technician Support
