

Interconnected Wireless Smoke Detector System

This interconnected smoke detector system allows for synchronized alarm activation across multiple units. When one detector senses smoke, all linked detectors will sound an alarm, providing enhanced early warning throughout a building.

Product Overview

Interconnected Wireless Smoke Detection

This interconnected smoke detector system is designed to provide synchronized alarm activation across multiple units throughout a building. When one detector senses smoke, all linked units sound an alarm simultaneously, ensuring early warning and enhanced safety. The system includes convenient test and hush buttons for easy maintenance and management of nuisance alarms.

Key Features

User Interface

- Test button for functional verification
- Hush button for silencing nuisance alarms

Core Functionality

Interconnected System, Wireless Communication, Synchronized Alarm, Early Warning

Technical Details

Maintenance Note

Do Not Paint

Model Identifier

KD-101LA
