

Internal Combustion Engine Carburetor

This carburetor mixes air and fuel in an internal combustion engine. It utilizes a venturi to create a vacuum, which draws fuel into the air stream for delivery to the engine cylinders.

Overview

High-Performance Carburetor

This internal combustion engine carburetor is designed for precise air-fuel mixture control, essential for efficient engine operation. It utilizes a venturi system to create the necessary vacuum for optimal fuel delivery to the cylinders. Constructed from durable cast metal, this unit is engineered for reliability and consistent performance in automotive applications.

Technical Specifications

Carburetor Type

Single-barrel

Key Components

- Float bowl for consistent fuel level
- Adjustment screws for tuning
- Fuel inlets
- Vacuum ports
