

Internal Combustion Engine for Construction Machinery

This internal combustion engine is designed for heavy-duty applications in construction machinery. It features a compact V-configuration, advanced fuel injection system, and durable components for reliable operation under demanding conditions.

Overview

High-Performance Construction Engine

This internal combustion engine is engineered specifically for heavy-duty construction machinery, offering a robust solution for demanding environments. Featuring a compact V-configuration and an advanced fuel injection system, it balances power output with fuel efficiency to maximize productivity. Designed for reliability and minimal downtime, this unit is highly versatile and suitable for integration into excavators, loaders, and power generators.

Technical Specifications

Key Features

- Advanced fuel injection system
- Durable heavy-duty components
- Compact design
- Optimized power-to-fuel ratio

Engine Configuration	V-configuration
Suitable Applications	Excavators, Loaders, Generators
