

Internal Combustion Forklift Engine

This internal combustion engine powers counterbalance forklifts used in industrial and warehouse environments. It enables the lifting and transportation of heavy loads, providing reliable power for demanding operations.

Overview

High-Performance Forklift Power

This internal combustion engine is specifically engineered for counterbalance forklift trucks operating in demanding industrial and warehouse environments. Designed for reliability and power, it supports heavy-duty lifting and material transport tasks. The system is optimized for propane fuel, ensuring consistent performance for both indoor and outdoor warehouse operations.

Technical Specifications

Operating Environment

Indoor • Outdoor

Fuel Type	Propane (LPG)
Primary Application	Industrial, Warehouse, Counterbalance Forklift
Engine Type	Internal Combustion
