

Internal Pipe Coating Sprayer

This internal pipe coating unit applies coatings to the interior surfaces of pipes. It utilizes a rotating head to ensure uniform coating distribution.

Product Overview

Professional Internal Pipe Coating Solution

The Internal Pipe Coating Sprayer is a specialized industrial tool designed for the precise application of protective coatings to the interior surfaces of piping systems. Featuring a robust cylindrical body with cross-braced legs for stability, this unit ensures consistent coverage through its integrated rotating head mechanism. It is an essential asset for industries requiring reliable corrosion protection and functional insulation for their infrastructure.

Technical Specifications

Design & Construction

- Cylindrical body design
- Cross-braced support legs
- Rotating coating head
- Central material delivery rod
- Brass fluid/gas fittings

Primary Applications

Corrosion Protection, Internal Pipe Coating, Industrial Insulation
