

Intravenous Infusion Microfusion Pump

This microfusion pump is designed for precise and controlled intravenous infusion. It features adjustable syringe sizes, rate settings, and alarms for near empty or empty syringe conditions.

Product Overview

Precision Microfusion Pump

This intravenous infusion microfusion pump is engineered for precise and controlled fluid delivery in clinical settings. The device features a user-friendly interface with digital displays for monitoring rate, dose, body weight, and drug volume. It is designed with safety in mind, incorporating occlusion limit controls and audible alarms for near-empty or empty syringe conditions to ensure patient safety during therapy.

Operational Features

Control Panel Functions

- Start/Stop control
- Fast delivery mode
- Power On/Off
- Parameter selection
