

Inverter MIG/MAG/MMA Welding Machine

This inverter welding machine utilizes IGBT switching and PWM control technology. It supports DC MIG/MAG, Flux Cored Arc Wire (FCAW), and MMA welding, and is capable of welding various metals including carbon steel, alloy steel, and stainless steel.

Overview

Versatile Inverter Welding Solution

This advanced inverter welding machine utilizes PWM control technology and IGBT switching to deliver excellent arc characteristics and stable performance. Designed for professional versatility, it supports DC MIG/MAG, Flux Cored Arc Wire (FCAW), and MMA welding processes. The unit is built for durability with moisture-proof, anti-corrosion, and anti-vibration features, making it a reliable choice for welding carbon steel, alloy steel, and stainless steel.

Technical Specifications

Supported Welding Modes	MIG, MAG, MMA, FCAW
Max Wire Capacity	1 kg
Energy Saving	Up to 30% reduction in power consumption

Safety & Protection

Safety Features

- Over-current protection
- Over-heat protection
- VRD (Voltage Reduction Device)
- Moisture-proof construction
- Anti-conductive dust protection

Performance Metrics

Performance Highlights

30 % Energy Savings	1 kg Max Wire Capacity
