

Inverter Plasma Cutting Machine

This is an inverter plasma cutting machine. It is designed for precision cutting of various metals and offers adjustable current settings and an efficient cooling system.

南通富力机电设备有限公司

Product Overview

Industrial Plasma Cutting Performance

The LG-60E is a high-performance inverter plasma cutting machine engineered for precision cutting across a variety of metal types. Designed for industrial applications, it features adjustable current settings and an efficient cooling system to ensure consistent, reliable results. Built with durability in mind, this machine combines robust construction with a user-friendly interface to meet demanding production requirements.

Technical Specifications

Model	LG-60E
Technology	Inverter Plasma

Performance Metrics

Cutting Capabilities

60 A
Max Current

Features

Key Features	Adjustable Current, Efficient Cooling, Industrial Grade, Precision Cutting
