

Inverter Plasma Cutting Machine

This is an inverter welding machine suitable for various welding applications. It is equipped with a current meter, 2T/4T switch, and adjustable current control.

Product Overview

Professional Plasma Cutting Performance

This portable plasma cutting machine utilizes advanced IGBT inverter technology to deliver reliable, high-performance results. Designed for professional use, it features fan-cooled operation and robust thermostatic protection to ensure durability during demanding cutting tasks. The unit offers stepless current adjustment and comprehensive safety protections, making it a versatile and secure choice for various industrial applications.

Technical Specifications

Technology Type	IGBT Inverter
Arc Starting Method	Contact start
Current Adjustment	Stepless

Safety & Compliance

Integrated Protections

- Overheating protection
- Overload protection
- Over-current protection
- Over/lack voltage protection
- Thermostatic protection

Standards & Compliance	CE, ISO9001, RoHS, EMC Compliant
------------------------	----------------------------------

Package & Accessories

Included Accessories

- CUT torch
- Earth clamp
- Carton box
