

Inverter Plasma Cutting Machine CUT-40A

This inverter welding machine is designed for cutting applications. It features adjustable current and gas delay settings and a digital current meter for precise control.

Product Overview

Professional Plasma Cutting Solution

The CUT-40A is a portable, fan-cooled inverter plasma cutting machine engineered for high-performance metal fabrication. Utilizing advanced IGBT inverter technology, it ensures reliable arc starting and precise current control while maintaining a lightweight design. Equipped with comprehensive safety features including overheating, overload, and voltage protection, it is an essential tool for industrial cutting applications.

Technical Specifications

Rated Current

40 A

Output Current

Technology	IGBT Inverter
Power Supply	Single-phase

Features & Protection

Integrated Protections

- Overheating protection
- Overload protection
- Over-current protection
- Over/Lack voltage protection

Compliance	CE, ISO 9001, RoHS, EMC Compliant
------------	-----------------------------------

Equipment

Accessories Included

- CUT torch
- Earth clamp
- Carton box
