

IP Phone Interface Box

This IP phone interface box is a compact communication device for integrating IP phones into modern telephony systems. It features Ethernet ports for connecting IP phones and other network devices, plus LED indicators for monitoring activity and status.

Overview

Seamless IP Telephony Integration

The IP Phone Interface Box is a compact and efficient communication device engineered for seamless integration into modern IP telephony systems. Designed with a robust architecture, it supports reliable operation for both small and large-scale deployments. This unit features multiple Ethernet ports and clear status indicators, making it an ideal solution for communication infrastructure within apparel and textile machinery industries.

Technical Specifications

| | |
|--------------|---|
| Connectivity | Multiple Ethernet ports |
| Monitoring | Indicator LEDs, Network Activity, Device Status |
| Power Input | Dedicated power input |

Applications

Target Industries

Apparel Industry • Textile Machinery
