

Iron Casting Mold with Coated Sand Interior

This iron mold is designed with a coated sand interior for casting. It is suitable for industry machinery applications and made of iron.

Product Overview

Precision Iron Casting Mold

This high-performance iron casting mold features a specialized coated sand interior, engineered for precision and durability in high-volume foundry environments. Designed to facilitate consistent material flow, it ensures clean, accurate castings for a variety of industrial components. Its robust construction makes it an ideal solution for manufacturing spherical parts and other complex shapes efficiently.

Technical Specifications

Material Composition	Iron with Coated Sand Interior
Design Features	Coated Sand Lining, Central Gating System, Multi-Part Construction, High-Volume Compatible

Applications

Compatible Foundry Products

- Grinding balls
- Grinding bars
- Bent axles
- Brake drums
- Water meter shells
- Hammers
- Form relieved teeth
- Steel talons
