

# Iron Ore Fines 62% Grade

Iron ore fines with a grade of 62% iron content. These fines are commonly used in steel production and other metallurgical applications.

## Product Overview

### High-Grade Iron Ore Fines

This Iron Ore Fines product features a consistent 62% iron content, making it an ideal raw material for steel manufacturing processes. Sourced from high-quality open-pit mining operations, this material is optimized for efficient smelting and processing. Its chemical and physical properties are carefully monitored to ensure reliability and performance in industrial furnace applications.

## Technical Specifications

### Iron Content (Fe)

**62 %**

Fe Grade

Material Form	Fines
Mining Method	Open-pit

## Compliance and Standards

Industry Suitability	Steel Production, Industrial Raw Material, Smelting
