

Iron Ore Fines, 63.5% Iron Content

These iron ore fines contain 63.5% iron. They are suitable for steelmaking and other metallurgical processes.

Product Overview

High-Grade Iron Ore Fines

This high-grade Indian iron ore fine features a consistent 63.5% iron content, making it an essential raw material for various metallurgical applications. Engineered for reliability, it is specifically optimized for use in sintering and pelletizing processes within steelmaking facilities. With a focus on consistent quality and precise particle size distribution, this product is available in bulk quantities to support efficient, large-scale supply chain operations.
