Overview

Professional IT Infrastructure Housing

This high-performance server cabinet is engineered for secure and efficient management of critical IT infrastructure in data centers and network closets. It features a robust cold-rolled steel construction with a static load capacity of 800kg, ensuring stability for heavy hardware. Designed for ease of use, it includes flexible configuration options such as removable panels and versatile mobility via integrated castors and leveling feet.

Technical Specifications

Steel Thickness

Component	Thickness (mm)
Mounting Profile	2
General Structure	1.5

Static Load Capacity

800 kg

Material Composition

SPCC Cold Rolled Steel, Tempered Glass

Features

Core Features

- Tempered glass front door
- Removable side panels
- Ventilated bottom panel
- Top and bottom cable entry
- Lockable access panels

Mobility & Stability

Heavy-duty Casters • Adjustable Leveling Feet

Finishing

Surface Processing

- Degreasing
- Pickling
- Phosphoric treatment
- Power coated
