

Jaw Crusher for Coarse Crushing

The PE and PEX series jaw crushers are designed for robust coarse crushing applications. These crushers utilize a reciprocating jaw action to efficiently reduce the size of materials.

Product Overview

Robust Coarse Crushing Solution

The PE and PEX series jaw crushers are engineered for heavy-duty coarse crushing applications in mining, quarrying, and construction. Utilizing a reciprocating jaw action, these machines efficiently reduce material size for primary and secondary crushing stages. They feature a heavy-duty frame and manganese steel jaw plates to ensure extended wear life and consistent performance.

Primary Industries

Mining, Quarrying, Construction

Technical Specifications

Available Series

- PE Series (Optimized for larger feed sizes)
- PEX Series (Enhanced performance for finer crushing)

Key Components

Heavy-duty frame • Manganese steel jaw plates

Operational Capabilities

- Reciprocating jaw action
- Adjustable discharge settings
