

Jaw Crusher

Jaw crushers are designed for high throughput and reliable operation. They are suitable as primary crushers for a variety of rocks, offering easy maintenance and low energy consumption.

Overview

High-Efficiency Primary Crushing

The C Series Jaw Crusher is a high-performance primary crushing machine engineered for demanding mining and aggregate applications. Utilizing an advanced toggle mechanism, it delivers superior throughput capacity, high crushing ratios, and consistent output gradation. Designed with a heavy-duty frame and durable wear parts, this crusher ensures long service life and minimal operational downtime across various industries.

Performance & Application

Processable Materials

- Hard rock
- Ore
- Recycled concrete

Suitable Industries

Mining, Construction, Building Materials, Transportation, Chemical, Water Conservancy

Certifications

Compliance & Standards

CE • ISO 9001 • SGS • TÜVRheinland • Bureau Veritas

Design Features

Technical Highlights

- Optimized crushing chamber
- Energy-efficient operation
- Heavy-duty frame construction
- Adjustable output settings
- Easy-access maintenance components
