

# Jet Pump for Water Transfer and Pressure Boosting

This jet pump is designed for efficient water transfer and pressure boosting. It is suitable for residential and light commercial applications with durable construction and reliable operation.

## ADDITIONAL IMAGES

## Product Overview

### High-Efficiency Jet Pump

This jet pump is engineered for the efficient transfer of clean water, making it an ideal solution for domestic water supply, tank filling, and irrigation systems. It features a robust design with high-quality copper wiring and cold-rolled silicon steel components to ensure reliable performance and energy efficiency. Designed for durability, the unit includes anti-rust treated castings and stainless steel components for long-lasting operation in various environments.

## Technical Specifications

### Operating Limits

|                            |                                 |                                  |                                      |
|----------------------------|---------------------------------|----------------------------------|--------------------------------------|
| <b>9 m</b><br>Suction Lift | <b>35 °C</b><br>Max Liquid Temp | <b>40 °C</b><br>Max Ambient Temp | <b>6 bar</b><br>Max Working Pressure |

## Features & Construction

### Key Features

- 100% copper motor winding
- Automatic wiring assembly
- Cold-rolled silicon steel sheets for high-speed punching
- Stainless steel nut components
- Anti-rust casting treatment
- Electrophoresis finish

## Applications

### Suitable Applications

Tank Filling, Domestic Water Supply, Water Transfer, Pressure Boosting, Irrigation

## Certifications

### Certifications

CE • RoHS • ISO 9001 • ISO 14001 • OHSAS 18001
