

JIS 10K Globe Valve DN 40-200

This JIS 10K Globe Valve is designed for industrial applications requiring precise flow control. It is constructed from durable materials ensuring longevity and reliability across a wide range of fluids and operating conditions.

Overview

JIS 10K Globe Valve

This globe valve is engineered to meet Japanese Industrial Standards (JIS) for precise flow control in demanding industrial environments. Designed for reliability and durability, it is suitable for a wide range of fluid applications. The valve offers consistent performance and is compatible with standard piping systems requiring a 10K pressure rating.
