

JIS Frame Type Turnbuckle with Hook and Eye Ends

This JIS frame type turnbuckle adjusts tension and length in ropes, cables, and tie rods. It features a robust frame construction with threaded ends, one with an eye and the other with a hook for secure connections and easy adjustment.

Product Overview

JIS Frame Type Turnbuckle

This JIS frame type turnbuckle is engineered for precise tension adjustment and length control of ropes, cables, and tie rods. Featuring a robust frame construction, it includes threaded ends with a versatile hook and eye configuration for secure connections. It is an essential component for rigging, tensioning, and various industrial applications requiring reliable performance.

Technical Specifications

Design Standard	JIS (Japanese Industrial Standard)
End Fittings	Hook, Eye
Construction	Frame Type

Applications

Common Applications

- Rigging
- Tensioning
- Cable adjustment
- Tie rod systems
