

JIS Standard Gate Valve DN 15-900

This industrial gate valve is designed to control the flow of fluids in pipelines. It features a flanged connection for secure, leak-proof installation and is constructed from durable materials.

Product Overview

JIS Standard Gate Valve

This industrial gate valve is engineered to provide reliable flow control for pipelines in demanding environments. Built to comply with JIS standards, it ensures compatibility and consistent performance across various industrial sectors, including water, oil, and gas applications. The design features a robust flanged connection, facilitating a secure and leak-proof installation for long-term operational efficiency.
