

JRWD Series Worm Gear Reducer

The JRWD series worm gear reducer optimizes design parameters for high transmission efficiency. It is applied in printing, dyeing, machine tools, textile, and automation equipment.

Overview

JRWD Series Worm Gear Reducer

The JRWD series worm gears are designed for robust power transmission in a compact form factor. Featuring a durable housing and precision-engineered components, these units offer high efficiency and reliability for diverse industrial applications. The modular design ensures smooth, quiet operation with minimal maintenance and flexible mounting options.

Technical Specifications

Model Range	25 - 90
Available Ratios	7.5 - 100

Performance Metrics

Input Power

0.06 kW

Min Input Power

4 kW

Max Input Power

Output Torque

2.6 N.m

Min Output Torque

610 N.m

Max Output Torque

Features

Design Highlights

- Compact form factor
- Durable housing
- Precision-engineered components
- Modular design
- Quiet operation
