

K52 K54 K55 Chuck Jaws

These precision-engineered chuck jaws are designed for K52, K54, and K55 chucks. They provide a secure and accurate grip for various machining applications and are constructed from high-quality materials for durability.

Product Overview

Precision Chuck Jaws

These chuck jaws are precision-engineered to provide a secure and accurate grip for K52, K54, and K55 chuck models. Constructed from high-quality materials, they are designed to withstand demanding machining applications while ensuring extended service life. Ideal for various industrial settings, these components are essential for maintaining machining accuracy and operational reliability.

Compatibility

Compatible Chuck Models	Models
	K52, K54, K55

Performance

Key Performance Benefits

- Precision-engineered for accurate clamping
- High-quality material construction
- Durable design for extended service life
- Versatile application in industrial machining
