

Kerosene Blow Torch for Soldering and Brazing

This kerosene blow torch is designed for various heating applications, including soldering and brazing. It features a durable metal construction, a manual pump for pressurizing the fuel tank, and a control valve for adjusting the flame intensity.

Product Overview

Professional Kerosene Blowlamp

The MD30-2 Kerosene Blowlamp is a robust and reliable tool engineered for high-performance heating applications in industrial and workshop environments. Featuring durable metal construction, it is specifically designed for tasks such as soldering and brazing. The unit includes an integrated manual pump for precise tank pressurization and a control valve for fine-tuning flame intensity, ensuring efficient combustion.

Technical Specifications

Key Features

- Manual pressure pump
- Adjustable flame control valve
- Integrated preheating cup
- Durable metal construction

Model Number	MD30-2
Fuel Type	Kerosene

Applications

Primary Applications	Soldering, Brazing, Industrial Heating, Workshop Maintenance
----------------------	--
