Key Operated Elevator Control Switch

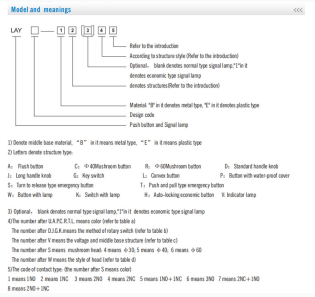
This key-operated switch is designed for on/off control or pushbutton functionality. It is commonly used in elevator systems for secure and reliable operation.

Product Overview

Professional Elevator Key Control Switch

The SB7-CG25 is a robust, key-operated control switch designed for high-reliability environments such as elevator systems and industrial control panels. Featuring durable zinc alloy construction and high-grade anti-flam plastics, it ensures operational security and longevity. It is fully compliant with international safety standards, making it an ideal choice for professional electrical distribution and interlocking applications.

Technical Specifications



Technical guide for understanding switch model configuration and contact types.

Electrical Parameters

Parameter	Value
Rated Insulation Voltage	AC 600V (50/60Hz)
Heating Current	10A
Insulation Resistance	e50MΩ
Contact Resistance	d25mΩ
Power Frequency Withstand	AC 2.5KV/min

Mechanical and Service Life

500000 cycles	250000 cycles	100000 hours
Pushbutton Mechanical Life	Selector Switch Mechanical Life	Continuous Working Life

Compliance and Standards

Compliance Standards

- GB/T14048.1
- IEC60947-5-1

Certifications	CE, ISO 9001, ROHS, UL
