

# Keyway Broach Set

This keyway broach set is designed for cutting keyways in machined parts. It includes broach sizes and shims to accommodate different keyway widths and depths.

## Product Overview

### Professional Keyway Broach Set

This comprehensive set is specially designed for cutting precise keyways in machined holes across a variety of components like pulleys and gears. Manufactured from high-speed steel (HSS) for enhanced durability and precision, it is suitable for both ferrous and non-ferrous materials with a hardness of up to 35HRC. The set includes multiple broach sizes and shims, all housed in a fitted case for professional organization and protection.

## Technical Capabilities

### Maximum Material Hardness

**35 HRC**  
Hardness Limit

### Material Compatibility

Ferrous Materials, Non-Ferrous Materials

## Material & Construction

### Tool Material

High-Speed Steel (HSS)

### Key Features

- Precision ground cutting edges
- High durability HSS construction
- Includes various broach sizes
- Includes necessary shims
- Supplied in a fitted protective case

## Application

### Operation Methods

- Broaching machine
- Manual broaching puller

### Typical Use Cases

Pulleys, Gears, Internal Keyway Cutting
