

Ku Band Single Output LNB

This LNB is a single-output model, meaning it can feed one satellite receiver. It converts the signal from the satellite's downlink frequency to a lower frequency range.

Product Overview

High-Performance Ku Band LNB

This Ku Band Single Output LNB is a precision electronic component designed for reliable satellite signal reception. It efficiently converts high-frequency satellite downlink signals into a lower frequency range suitable for transmission via coaxial cables to your receiver. Featuring a robust, weatherproof enclosure and a standard F-connector, this unit is engineered for durability and easy integration into outdoor satellite dish systems.

Technical Specifications

Frequency Band	Ku Band
Number of Outputs	1
Connector Type	F-connector (Threaded)

Features & Durability

Common Applications

- Satellite TV reception
- Satellite signal conversion
- Outdoor satellite dish systems

Weather Resistance	Yes
Included Protection	Weatherproof Enclosure, Protective Cap
