

Ku-Band Single Output LNB

This low-noise block downconverter (LNB) is a receiving device mounted on satellite dishes for satellite TV reception. It is designed for Ku-band reception and features a single output for use with a single receiver.

Product Overview

High-Performance Ku-Band Reception

This Ku-band single output LNB is engineered to deliver reliable satellite signal reception for professional and residential applications. The device excels at amplifying weak satellite signals while effectively filtering noise to maintain optimal image and data quality. Its robust, weatherproof housing ensures long-term durability against harsh environmental conditions, making it an essential component for any satellite dish installation.

Technical Specifications

Core Functions

- Signal amplification
- Noise filtering
- Frequency downconversion

Frequency Band	Ku-Band
Number of Outputs	1
Key Features	Weatherproof, Low-Noise, Single Output
