

Laboratory Analysis Instrument

This instrument is used for conducting detailed analyses in laboratory settings. It provides precise measurements and reliable data for scientific research and quality control.

Product Overview

Laboratory Analysis Instrument

This laboratory analysis instrument is designed for precision and reliability in professional research environments. It features robust construction and standardized connectivity to ensure seamless integration with existing laboratory infrastructure. Engineered for consistent performance, it provides essential power stability and operational safety for sensitive analytical tasks.

Power and Connectivity

Connector Type	IEC C13
Plug Standard	European Type E
Safety Features	Three-pin grounding, Robust cable construction
