

Laboratory Analysis Instrument with Brush Head

This is a specialized instrument designed for laboratory analysis. It features a cylindrical brush head attached to a long, slender handle with a looped grip for precise manipulation and sample collection.

Product Overview

Precision Laboratory Instrument

This specialized laboratory analysis instrument is engineered for precise manipulation and sample collection in experimental settings. Featuring a distinct cylindrical brush head attached to a long, slender handle, it offers the control required for delicate analytical procedures. Constructed with durable materials, this tool ensures reliable performance and longevity in demanding laboratory environments.

Design & Construction

Key Design Features

- Cylindrical brush head configuration
- Long, slender handle design
- Looped grip for ergonomic handling
- Durable material construction

Application

Laboratory Analysis, Sample Collection, Experimental Research
