

Land-Based Oil Drilling Rig

This land-based oil drilling rig is designed for drilling and well intervention operations. It features a derrick structure, drawworks, and various support systems.

Overview

Land-Based Drilling Capability

This land-based oil drilling rig is engineered for high-performance drilling and well intervention operations. Featuring a robust derrick structure and integrated substructure, the system is designed to prioritize structural integrity and operational efficiency in demanding industrial environments. The unit includes essential components such as drawworks and comprehensive support systems to ensure reliable performance during field deployment.

Technical Specifications

Core Components

- Derrick Structure
- Substructure
- Drawworks
- Support Systems

Primary Application

Oil Drilling, Well Intervention

Performance Metrics

Operational Highlights

High Structural Integrity • Operational Efficiency
