

Large Diameter Carbon Steel Forged Flange

This is a large diameter forged flange constructed from carbon steel. It is a heavy-duty component designed for demanding applications.

Product Overview

Large Diameter Carbon Steel Forged Flange

This large diameter forged flange is engineered for heavy-duty industrial applications where high strength and structural integrity are critical. Designed as a seamless rolled ring, this component offers exceptional durability and performance in demanding environments. Its robust construction makes it an ideal solution for heavy machinery and large-scale industrial equipment.

Dimensional Specifications

Outer Diameter Range	700 mm - 9000 mm
Maximum Thickness	800 mm
Maximum Height	1500 mm

Performance Metrics

Maximum Forging Weight

40 tons

Max Weight

Material & Construction

Process

Seamless Rolled Ring • Forged

Material

Carbon Steel
