

Large Diameter Hot Rolled Ring Flange

This is a large diameter hot rolled ring flange. It is suitable for heavy-duty applications requiring robust and reliable flange connections.

Product Overview

Large Diameter Seamless Rolled Rings

This hot rolled ring flange is engineered for heavy-duty industrial applications, offering exceptional structural integrity through the seamless rolling process. Designed to support massive loads and withstand high pressures, it is an ideal component for large-scale machinery and critical infrastructure connections. With a versatile manufacturing range, these rings provide the dimensional accuracy and robustness required for demanding engineering environments.

Technical Dimensions

Outer Diameter Range

700 mm

Minimum OD

9000 mm

Maximum OD

Maximum Thickness

800 mm

Maximum Height

1500 mm

Capacity & Performance

Process Type

Hot Rolled • Seamless • Forged

Maximum Forging Weight

40 tons
