

Large Diameter Titanium Alloy Forged Flange

This large diameter forged flange is made from titanium alloy. It features a precision-machined surface and standardized bolt hole pattern for secure connections in critical infrastructure and industrial settings.

Product Overview

High-Performance Titanium Alloy Flange

This large-diameter forged flange is engineered from high-strength titanium alloy, specifically designed for demanding industrial applications. It offers exceptional corrosion resistance and mechanical reliability, making it ideal for high-pressure and high-temperature environments. With precise manufacturing and a robust design, it ensures secure connections in critical infrastructure projects.

Technical Capabilities

Outer Diameter Range	700 mm - 9000 mm
Maximum Weight	40 tons
Maximum Thickness	800 mm
Maximum Height	1500 mm
Key Features	Corrosion Resistant, High-Pressure Rated, High-Temperature Rated, Precision Machined
