

Large-Scale Solar Panel System

This solar panel system has a system size of 1.5876MWp. The module type is CS6P-P and it was completed in Oktober 2008.

System Overview

Large-Scale Solar Installation

This large-scale solar panel system represents a high-capacity renewable energy solution designed for utility-scale power generation. Featuring a substantial system size of over 1.5 MWp, this installation is optimized for maximum sunlight conversion in arid climates. The system was professionally completed in October 2008 and showcases a robust infrastructure setup including support structures and conversion components.

Status

Operational • Utility-Scale
