

Laser Engraving Machine for Metal and Plastic

This laser engraving machine is designed for marking and engraving on both metal and plastic materials. It features an integrated control system, a user-friendly interface, and safety features for operator protection.

Product Overview

Precision Laser Engraving Solution

This laser engraving machine is designed for precise and efficient marking on a variety of materials, including metals and plastics. Featuring a compact design with an integrated control system and a user-friendly interface, it ensures consistent results for small to medium-sized parts. The system prioritizes operator safety and is ideal for applications such as product identification, serial number marking, and decorative engraving.

Technical Specifications

Primary Applications

- Product identification
- Serial number marking
- Decorative engraving

Compatible Materials

Metal, Plastic

System Features

Design & Control

Compact Design • Integrated Control System • User-Friendly Interface
