

Laser Perforation Machine for Easy Tearing Lines

This laser perforation machine creates precise and consistent perforations for easy tearing. It integrates advanced laser control and material handling for high-speed perforation with minimal material waste.

Product Overview

High-Speed Laser Perforation System

This CO2 laser perforation machine utilizes advanced galvo scanning technology to deliver precise and consistent easy-tearing lines. It is specifically engineered for high-speed processing of soft packaging materials, including PVC, PE, and PET shrink sleeves and labels. By replacing traditional mechanical processing methods, this system offers superior accuracy, uniform pore diameter, and extended operational lifespan.

Technical Capabilities

Key Advantages

- High processing speed
- Long equipment lifespan
- Excellent pore diameter uniformity
- High operational accuracy
- Air-permeable hole creation

Processing Technology

CO2 Laser with Galvo Scanning

Compatible Materials

PVC, PE, PET, Shrink Sleeve, Shrink Label
