

Lawn Mower Engine Cylinder

This is a cylinder designed for lawn mower engines. The component provides structural support and heat dissipation with its aluminum housing and radial fin design.

Product Overview

High-Performance Lawn Mower Cylinder

This lawn mower engine cylinder is engineered for durability and efficient heat dissipation in garden tool applications. Utilizing advanced aluminum alloy die-casting techniques, it ensures a lightweight yet robust construction suitable for demanding lawn maintenance environments. The component features precision-machined finishes and integrated radial fins to maintain optimal operating temperatures during extended use.

Technical Specifications

Material	Aluminum alloy
Manufacturing Process	Die casting
Compatibility	Lawn Mower, Garden Tools

Design Features

Heat Dissipation Radial Fins • Optimized Airflow	
Mounting Points	Yes
