

Lay Flat PVC Ventilation Duct for Carpet Drying

This lay flat ventilation duct is made from fire and water-proof PVC fabric. It is designed for use with carpet drying machines and functions in temperatures between -20-80°C.

Product Overview

Professional Ventilation Solution

This high-performance lay-flat PVC ventilation duct is specifically engineered for use with carpet drying machines and industrial floor ventilators. Constructed from durable, fire-retardant and waterproof PVC fabric, it ensures reliable operation in demanding cleaning environments. The flexible design allows for rapid deployment and compact storage, while the secure buckle coupling facilitates efficient connectivity between machines.

Technical Specifications

Temperature Resistance

| | |
|--------------------------------------|-------------------------------------|
| -20 °C Minimum Temperature | 80 °C Maximum Temperature |
|--------------------------------------|-------------------------------------|

Material Composition

Fire-proof, Water-proof, PVC Fabric

Dimensions and Options

Standard Sizes

| Dimension Type | Range/Values |
|------------------|----------------|
| Diameter | 120mm - 1500mm |
| Standard Lengths | 5m, 10m |

Features

Available Colors

- Yellow
- Orange
- Red
- White
- Black

Coupling Method

Buckle coupling

Application

Primary Applications

- Carpet drying machine connectivity
- Ventilator connection for wet floor drying
