

LCD Display Assembly with Linear Actuator

This is an LCD display assembly with a linear actuator. It includes a control board and wiring harnesses for adjusting display parameters.

Product Overview

Integrated Display and Motion Control

This assembly combines a high-quality LCD display unit with an integrated linear actuator mechanism. Designed for precision positioning, the system allows for automated adjustment of the display's orientation or height. It includes a dedicated control board and robust wiring harnesses, making it an ideal component for industrial machinery interfaces or ergonomic workstation setups.

Technical Specifications

Included Components

- LCD Display Unit
- Linear Actuator / Cylinder
- Control Board
- Wiring Harnesses

Assembly Type

Electronic Assembly • Integrated Mechanism

Primary Application

Industrial Automation, Ergonomic Interface, Motion Control
