

LCD Display Unit

This LCD display unit features a screen for displaying information. It includes multiple buttons for operation and control.

Overview

Industrial LCD Control Unit

This industrial LCD display unit is engineered for integration with mechanical and hydraulic systems, providing real-time monitoring and control capabilities. Housed in a durable black casing, the unit features a responsive interface with multiple buttons, allowing operators to manage complex machinery effectively. It is designed for demanding environments, making it an ideal solution for industrial or automotive applications requiring precise sensor readings and system feedback.

Technical Specifications

Interface Type	LCD Screen with Multi-Button Control
Housing Material	Industrial-grade Black Casing
Application Compatibility	Hydraulic Systems, Industrial Automation, Automotive Control, Sensor Monitoring

System Integration

Installation Features

- Integrated cable and hose connectivity
- Compatible with hydraulic cylinder assemblies
- Supports mechanical tensioning and damping systems
