

LCD Monitor Controller Board

This LCD monitor controller board is designed for use in LCD monitors. It processes video signals and controls the LCD panel to display images.

Product Overview

Professional LCD Monitor Controller Board

This LCD monitor controller board, based on the MST718 chipset, is engineered to manage video signal processing and display control for LCD panels. It supports multiple input methods, including VGA, RCA, and antenna inputs, making it a versatile component for various display configurations. The unit features integrated power management and signal processing circuitry to ensure reliable performance.

Technical Specifications

Chipset Model	MST718
Board Version	V1.00
Production Date	2011-11-14

Connectivity

Supported Inputs	VGA, RCA, Antenna
------------------	-------------------

Quality Assurance

Quality Status	QC PASS
QC Serial Number	070538271
