

Lead-Acid Batteries for Automotive and Marine Use

These lead-acid batteries are designed for automotive and marine applications. They come in various sizes and capacities, with plastic casings and filler caps.

Product Overview

Reliable Power for Automotive and Marine Applications

These lead-acid batteries are engineered to provide a consistent and reliable power source for a wide range of automotive and marine equipment. Designed with durability in mind, the units feature a robust plastic casing that allows for easy visual inspection of electrolyte levels. Equipped with convenient filler caps and integrated carrying handles, these batteries are built for practical, long-term use in demanding environments.

Technical Specifications

Design Features

- Translucent casing for electrolyte level inspection
- Accessible filler caps for maintenance
- Integrated carrying handles
- Blue top design

Primary Applications	Automotive, Marine
Casing Material	Plastic
