

Leakage Molded Case Circuit Breaker

This device is suitable for AC 50 Hz lines with a rated voltage of 400 V and a rated current of 125 A. It provides leakage, overload, and short circuit protection, and can be configured for overvoltage protection.

ADDITIONAL IMAGES

Product Overview

Advanced protective features including overload, short circuit, and leakage detection.

High-Performance Circuit Protection

This leakage molded case circuit breaker is engineered for reliable power protection in AC 50Hz systems. It offers comprehensive security by integrating overload, short circuit, and leakage current protection into a single compact unit. Designed for versatility, it supports flexible installation methods including rail mounting to suit various residential, commercial, and industrial electrical distribution setups.

Technical Specifications

Designed for electric power transmission and distribution systems to prevent electrical hazards.
