

# LED Emergency Vehicle Light Module

This LED light module is designed for emergency vehicle applications, providing high-intensity visual signaling. It features a durable, weather-resistant housing for reliable performance in diverse environments.

## Overview

### High-Visibility Emergency Lighting

The LTD262 LED light module is a high-intensity signaling solution specifically designed for emergency and security vehicle applications. Featuring a robust, weather-resistant housing, it provides reliable performance in diverse environmental conditions. Its dual-color LED configuration ensures effective visual warning, while the streamlined design allows for straightforward integration into existing vehicle electrical systems.

## Technical Specifications

### Durability

Weather-resistant • Durable Housing

### LED Configuration

Blue, Red

## Applications

### Suitable Applications

- Emergency vehicles
- Security vehicles
- General high-visibility signaling
