

LED High-Definition Television

This high-definition television features a slim bezel for an immersive viewing experience. It supports multiple input options for connecting external devices.

Overview

High-Performance Interactive Display

This high-definition LED television serves as a versatile interactive display solution designed for professional environments, including corporate meeting rooms and educational settings. Featuring advanced infrared touch technology, it supports precise single, dual, and multi-point gesture recognition for intuitive handwriting and collaboration. The unit integrates a high-performance PC with a Windows operating system, creating a seamless all-in-one solution for digital presentations and interactive teaching.
