Product Overview

High-Efficiency LED Replacement Module

This high-intensity LED street light module is engineered as a robust replacement component for upgrading traditional street lighting systems. Featuring a dense array of surface-mount LEDs, it provides efficient and uniform illumination while ensuring long-term performance. The module is constructed with a durable metal frame designed for superior heat dissipation, making it an ideal solution for modernizing existing infrastructure with energy-efficient LED technology.

Technical Specifications

Serial Number	SN-LD-69-235-11C-178-187
Construction	Metal Housing, Surface-Mount LEDs, Thermal Management Design

Installation & Integration

Installation Features

- Clearly labeled connectors
- Integrated wiring for power connection
- Grounding support included
- Designed for existing fixture compatibility
